I build products that ship and move real numbers. I led a services-to-product pivot, grew a devotional app for elderly users to 10K+ downloads with a daily-use habit, and scaled a state-government operation from 3 centres to 25. Engineer by training, product by instinct.

EDUCATION

- Pimpri Chinchwad College of Engineering, Pune** Pune, India
Bachelor of Engineering - Computer Science; CGPA: 7.45 / 10 June 2026

EXPERIENCE

- TellMe DigiInfotech Pvt. Ltd.** Pune, India
 - Product Manager (Full-time)* Dec 2025 - Present
 - Product Management Intern* Feb 2025 - Nov 2025
 - Product-led pivot:** Proposed and led DivyaDarshan360, the company's first owned product, driving the shift from a services business to a product-led model; defined the vision, scoped the MVP, and shipped it live to market.
 - Full-surface product ownership:** Owned the full product surface across consumer and government contexts, from discovery and roadmap through PRDs, UX, go-to-market, and post-launch iteration, often as the only product person in the room.
 - AI readiness and enablement:** Led organisation-wide AI adoption: authored the company's AI usage policy, redefined SOPs around LLM workflows, and trained the team on responsible use and evaluation discipline.
 - C-suite advisory:** Advised the CEO on tech stack, AI adoption, automation, and vendor selection, and contributed to board preparation and customer-strategy decisions.
- Venoh Ventures** Remote, India
 - Product Lead (Contract)* Jan 2025 - Jul 2025
 - Two-sided marketplace:** Owned a marketplace connecting users with professionals (therapists, astrologers, teachers) for per-minute paid chat and calls, leading delivery across both the user-side and professional-side apps.
 - Zero to alpha in under 2 months:** Built and shipped both apps to a live alpha in under 2 months, owning discovery, roadmap, and the per-minute monetisation model.
 - Founder's product partner:** Translated business goals into product strategy and drove prioritisation and platform decisions in lockstep with the founder.
- ScriptAnalytica Technologies Pvt. Ltd.** Pune, India
 - Product Intern* Aug 2024 - Dec 2024
 - Shipped to production:** Drove the product from initial design through production launch, then extended it to iOS to widen the addressable user base.
 - 40% faster delivery:** Cut development time 40% by introducing reusable component libraries and tightening the feedback loop between design and engineering.

PROJECTS

- DivyaDarshan360 [Play Store] (Product Owner, Oct 2025):** Owned the full lifecycle of a 360-degree VR devotional app for elderly, Hindi-first users in low-bandwidth contexts, from user research and persona definition through launch and iteration. Drove 10K+ installs in 30 days at a cost-per-install of Rs 2-3 (vs a category norm near Rs 12) and retained them into a daily-use habit averaging nearly 3 minutes per user.
- MP Tourism TFC Ticketing (Product Owner, March 2026):** Led end-to-end development of a digital ticketing system for MP Tourism Facilitation Centres, owning senior state-government stakeholders through requirements, design, deployment, and training rollout. Replaced manual bottlenecks and scaled operations from 3 centres to 25.
- NABARD Warehouse Management System (Advisory, Jan 2026):** Advised the National Bank for Agriculture and Rural Development on modernising its warehouse management system; proposed an AI implementation roadmap spanning LLM-assisted QA, ML demand forecasting, inventory optimisation, and IoT-based real-time tracking, aligned with operational and compliance requirements.
- ZylianceFit (Personal AI Wellness Coach, Feb 2026):** Personal AI wellness coach that ingests real-time wearable data (heart rate, SpO2, sleep) and delivers personalised health guidance through a conversational interface. Owned end to end: persona, prompt design, conversational UX, and deployment. Built on a multi-layered architecture that improves the accuracy and transparency of its decision-making.

SKILLS SUMMARY

Strengths	0-to-1 product development, Solo/full-surface ownership, Paid growth & retention (cut CPI 5x), AI/LLM product work, Senior & government stakeholder management
Craft	Product discovery, User research, Experimentation, Metrics & analytics, Roadmapping & PRDs, Go-to-market
Technical	Python, SQL, Flutter, AWS, Firebase, REST APIs, Figma
Domains	AI / LLM products, Consumer (B2C), B2G & regulated, Mobile (iOS & Android), Healthtech
